with				-					
a									
telescope									

- Self attention can hold single translation/perspective at a time.
- Depends upon
- Similarity between
 - man and telescope
 - Saw and telescope
- In second scenario
 - Similarity may be between
 - Astronomer and Telescope
 - Saw and telescope
- Documentation summary

Paragraph

The future of AI in Pakistan presents a dynamic and promising landscape, marked by rapid advancements and a burgeoning ecosystem of innovation. With a robust talent pool of engineers and IT professionals, Pakistan is poised to become a significant player in the global AI arena. The government's proactive stance on AI, exemplified by initiatives like the National Strategy for Artificial Intelligence, aims to harness AI's potential across various sectors, including healthcare, education, agriculture, and urban infrastructure. Pakistani startups and tech giants are increasingly incorporating AI to solve complex societal challenges, improve efficiency, and enhance service delivery. Moreover, Pakistan's focus on ethical AI and data security aims to create a sustainable and responsible growth trajectory. As AI becomes more integrated into daily life and industry, Pakistan's unique blend of technological prowess, entrepreneurial spirit, and societal needs will likely shape a distinctive path in the AI domain, fostering innovation that is not only technologically advanced but also socially inclusive and impactful.

Summary-1

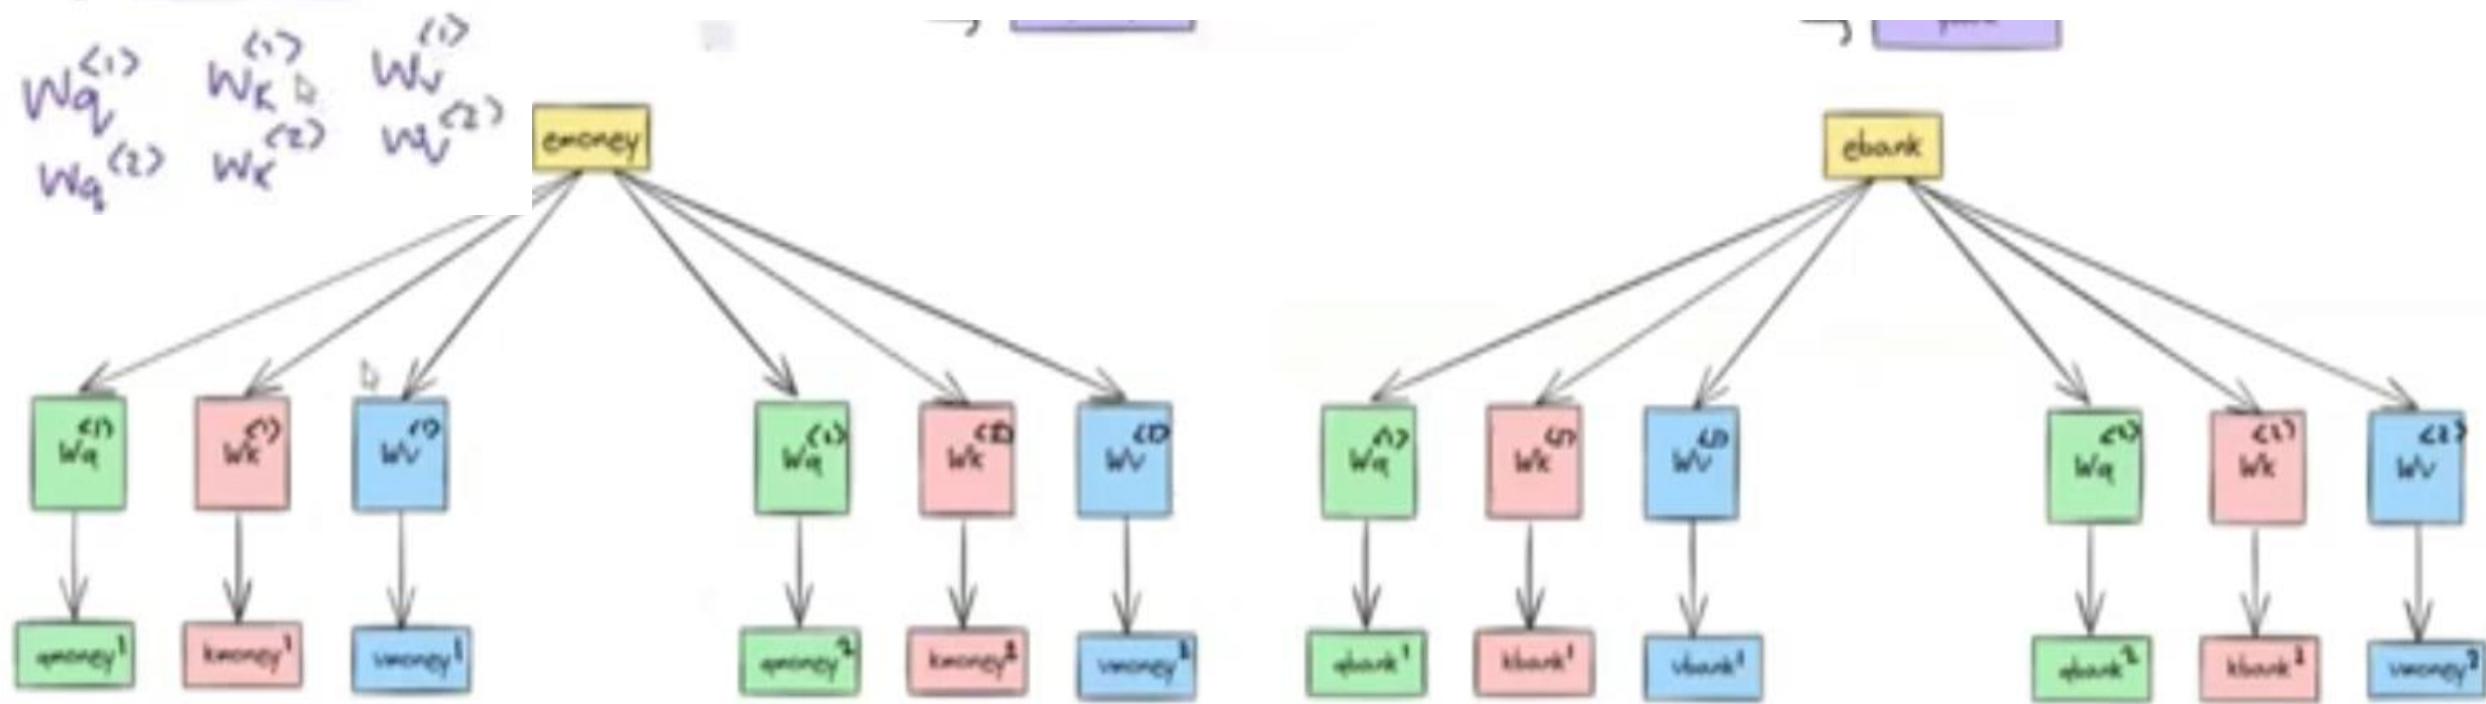

government initiatives to apply AI across various sectors like healthcare and education. With a focus on innovation, ethical AI, and data security, Pakistan aims to integrate AI to address societal challenges, enhance efficiency, and promote inclusive growth. This approach positions Pakistan to uniquely contribute to global AI advancements while ensuring sustainable and responsible development within its own borders.

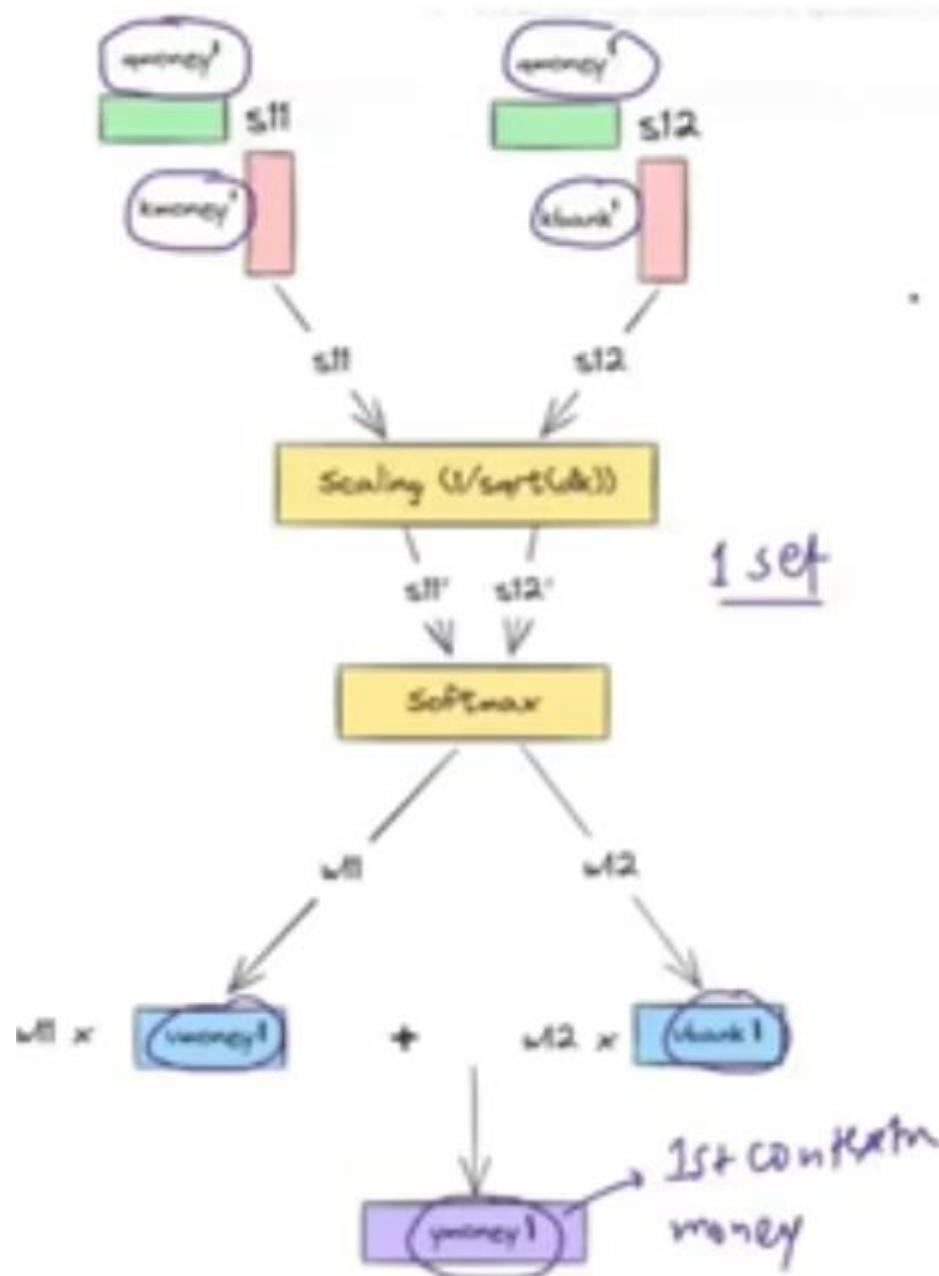

Summary-2

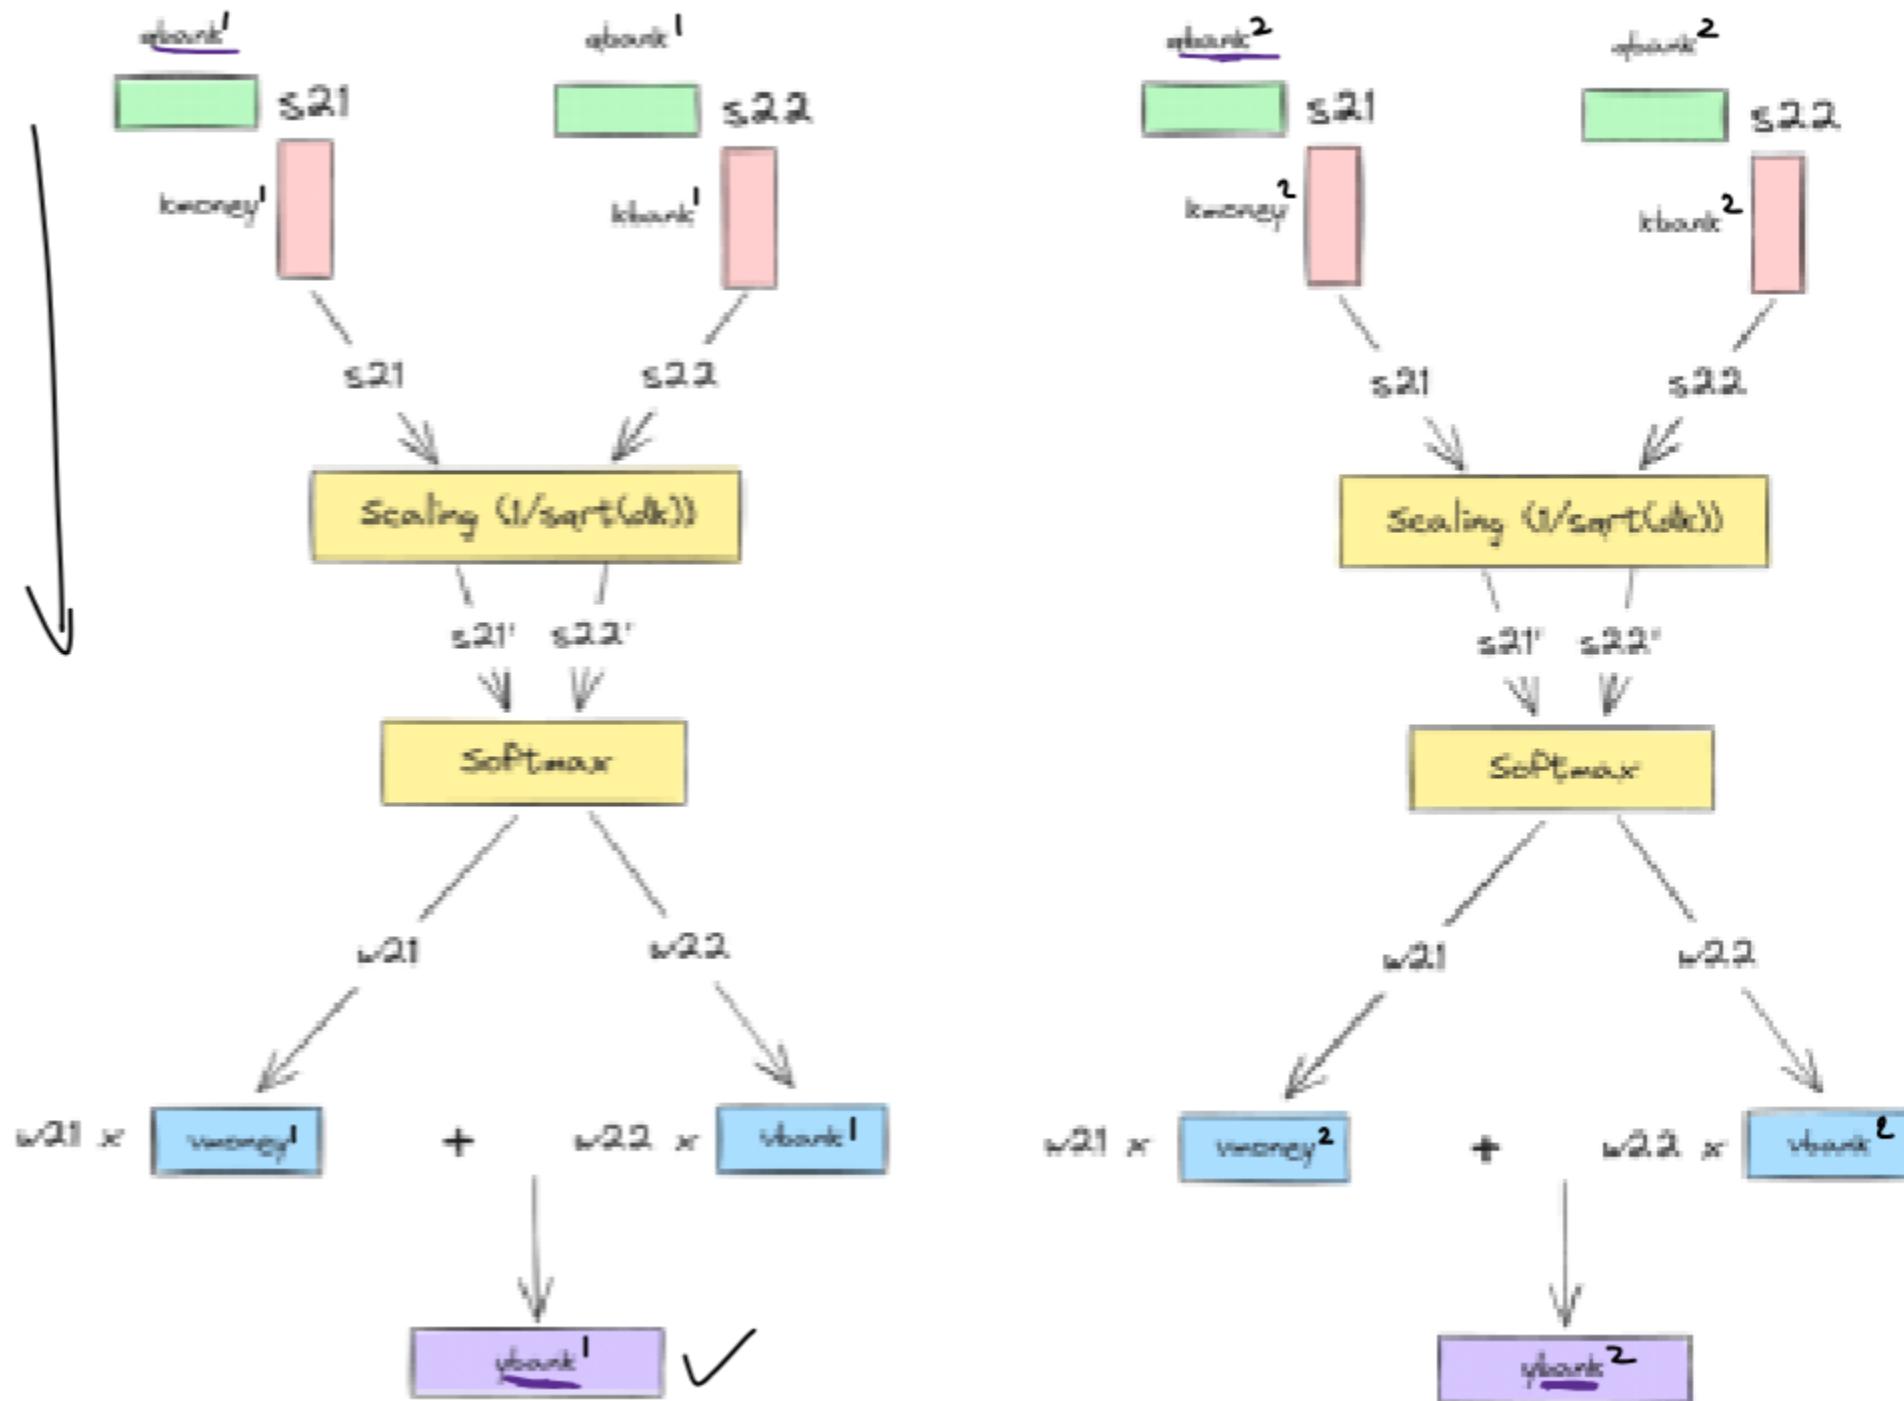

Pakistan's AI future holds promise as it harnesses a burgeoning talent pool and government initiatives to pioneer AI-driving innovation. With a focus on sectors like healthcare and education, Pakistan aims to leverage AI for a digital development. The emphasis on ethical AI and data security underscores pakistani commitment to responsible technological advancement. This approach positions pakistan not only as a global AI hub but also as a trailblazer in addressing societal challenges through cutting-edge technology

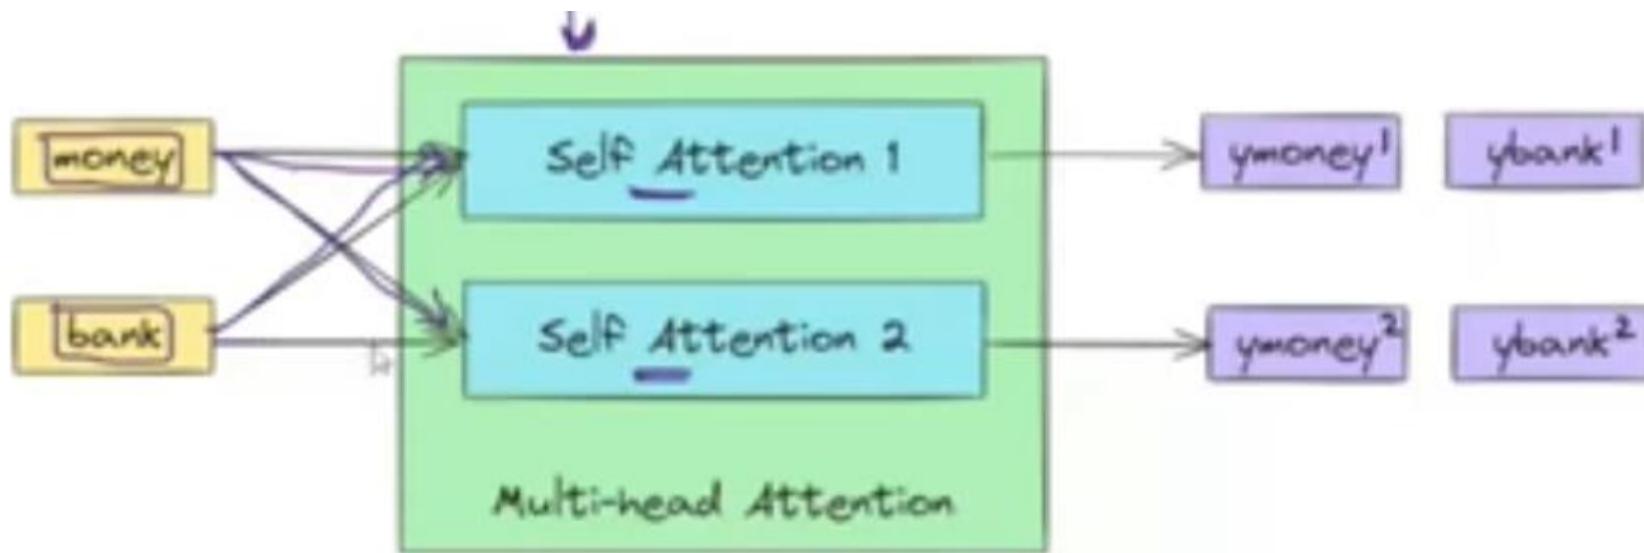

Multi-head Attention

- What if we use two self-attention model instead of one attention model.
- Use two sets of
 - W_1q, w_1k, w_1v
 - W_2q, w_2k, w_2v
- Whole process will be done twice and you will be two contextual vectors

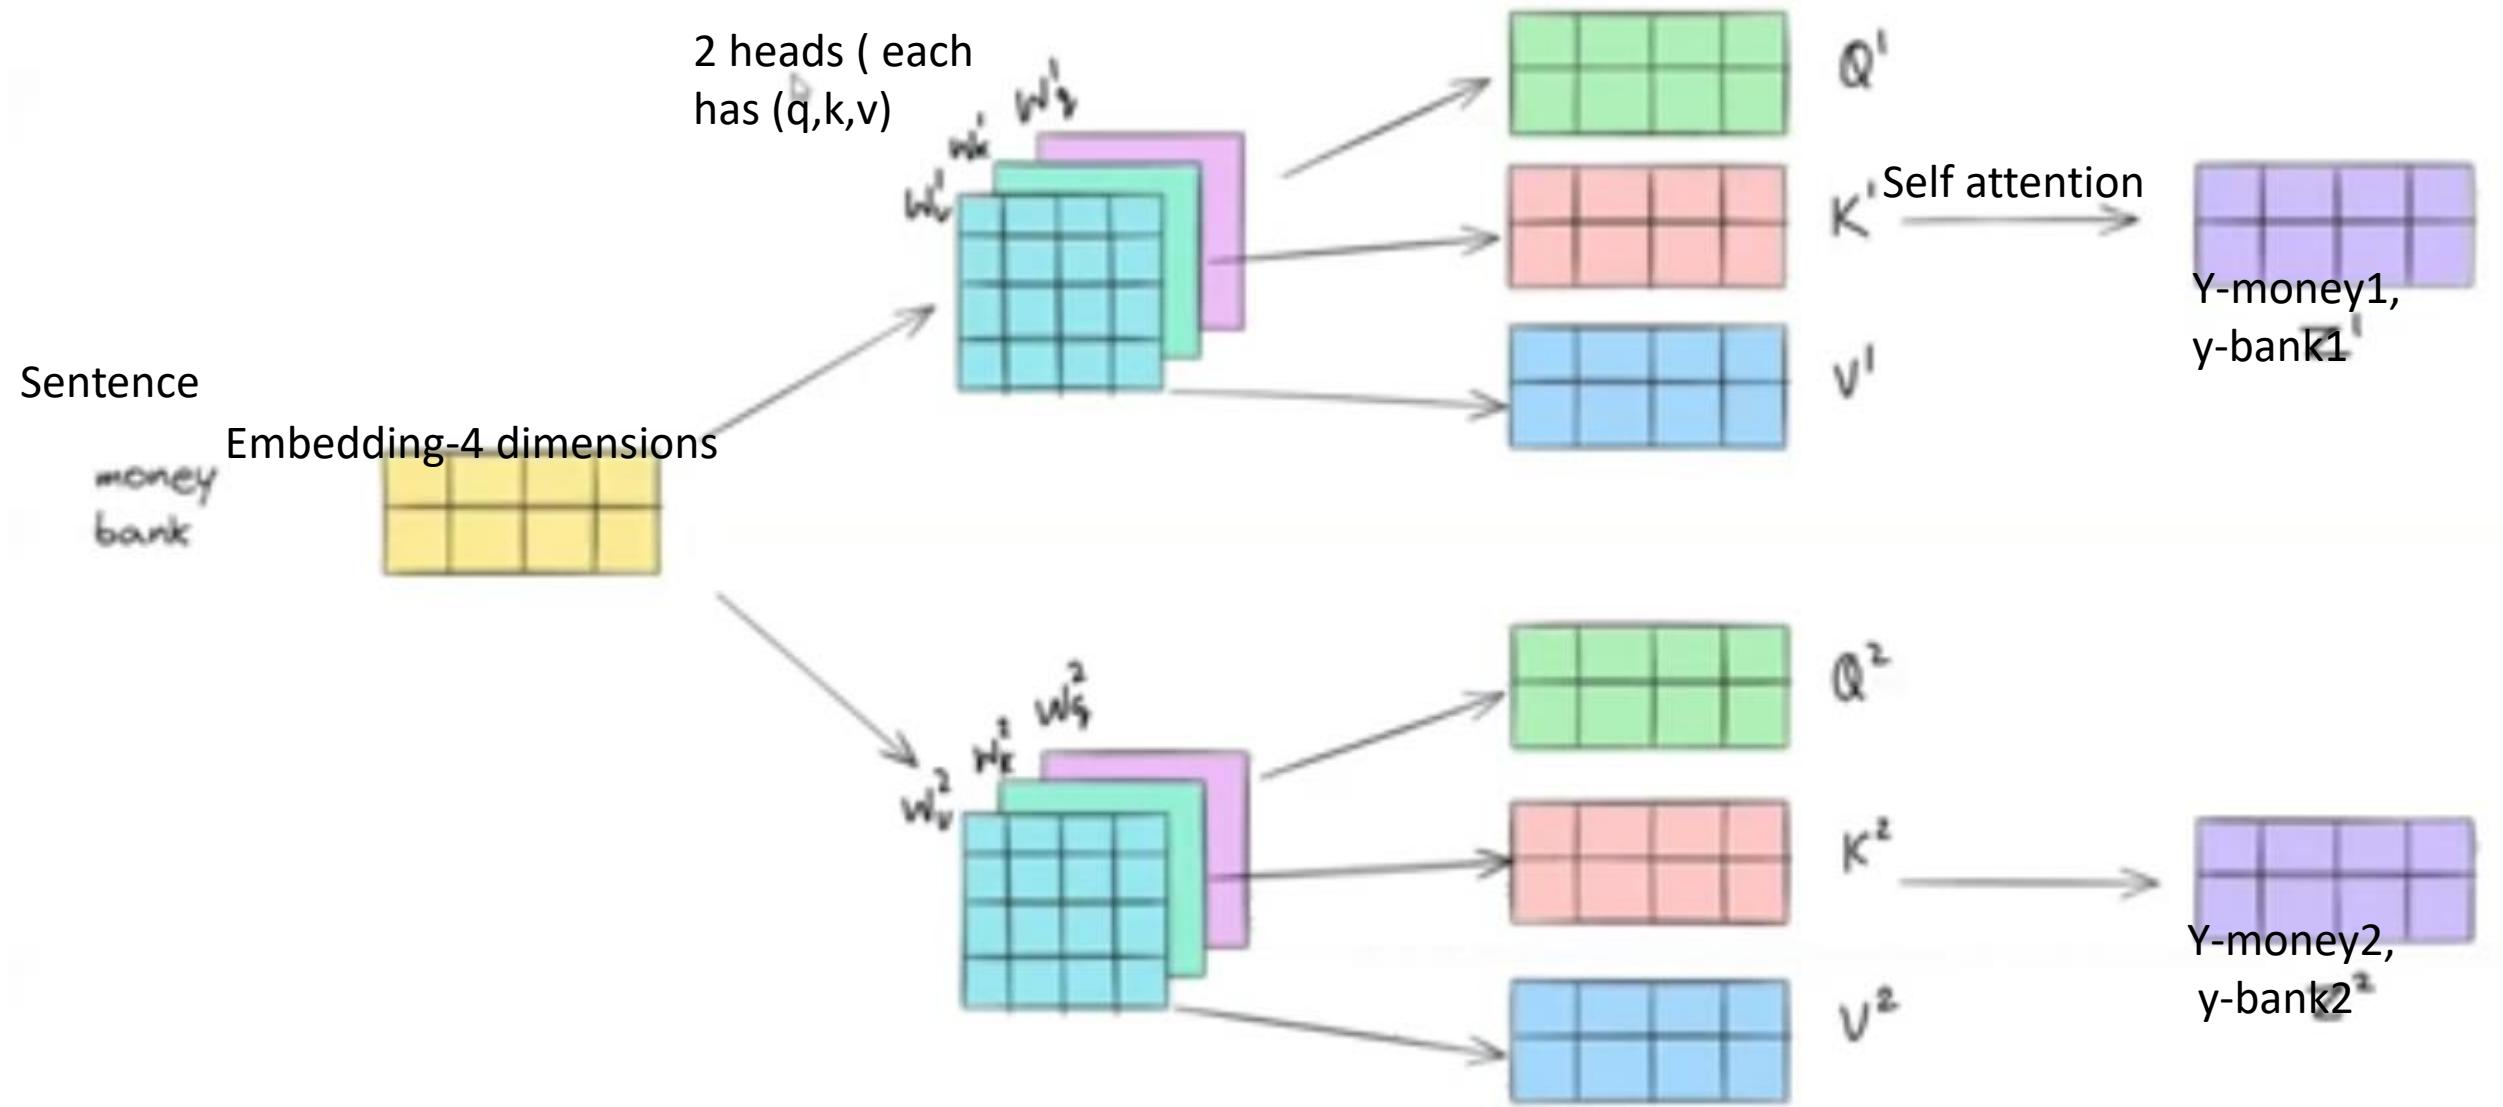

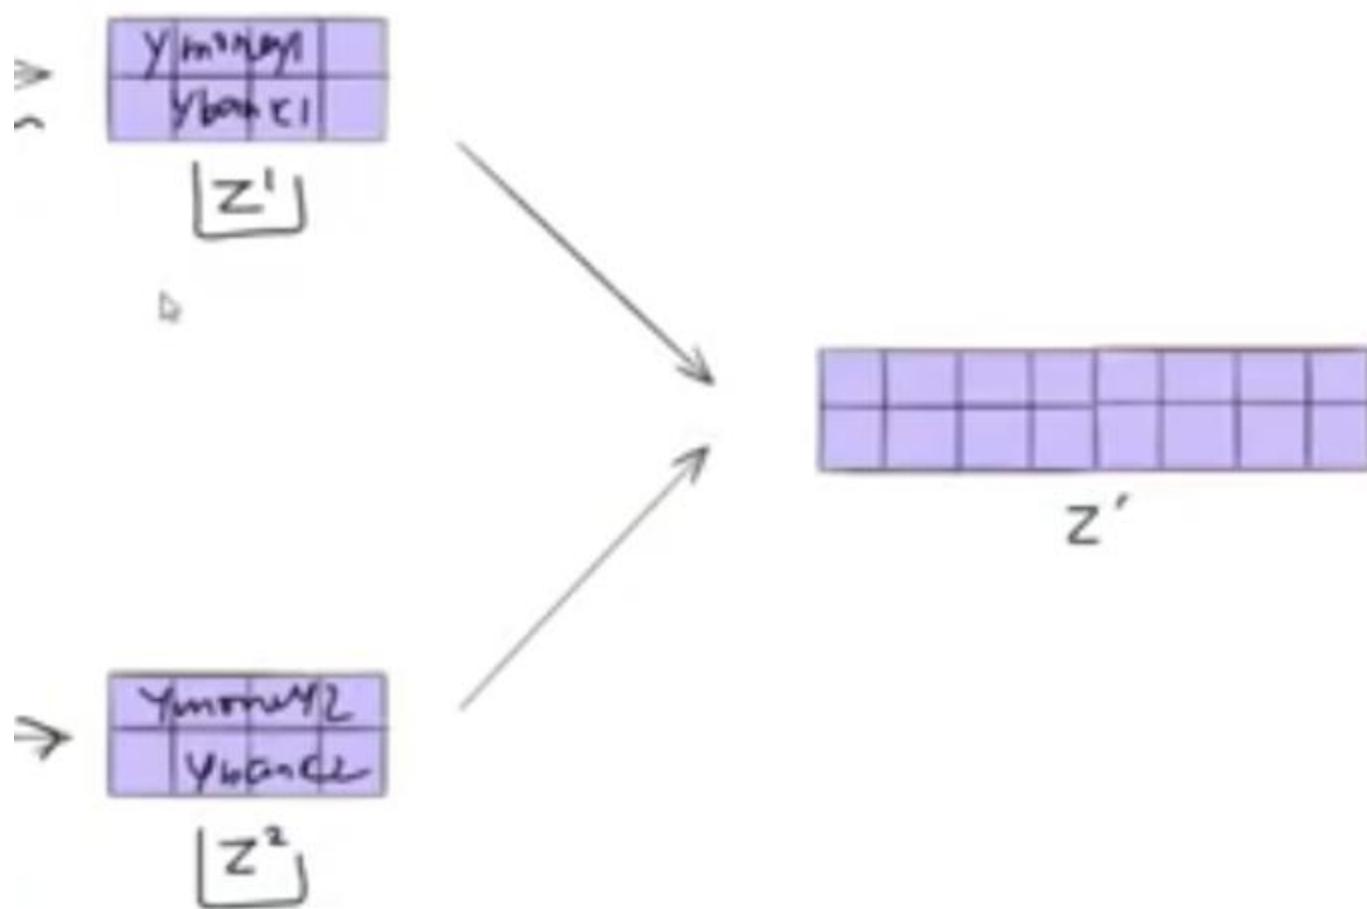

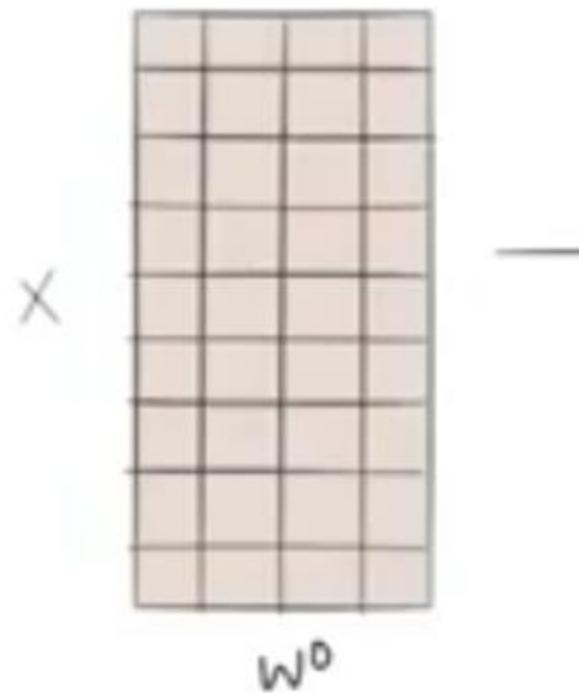

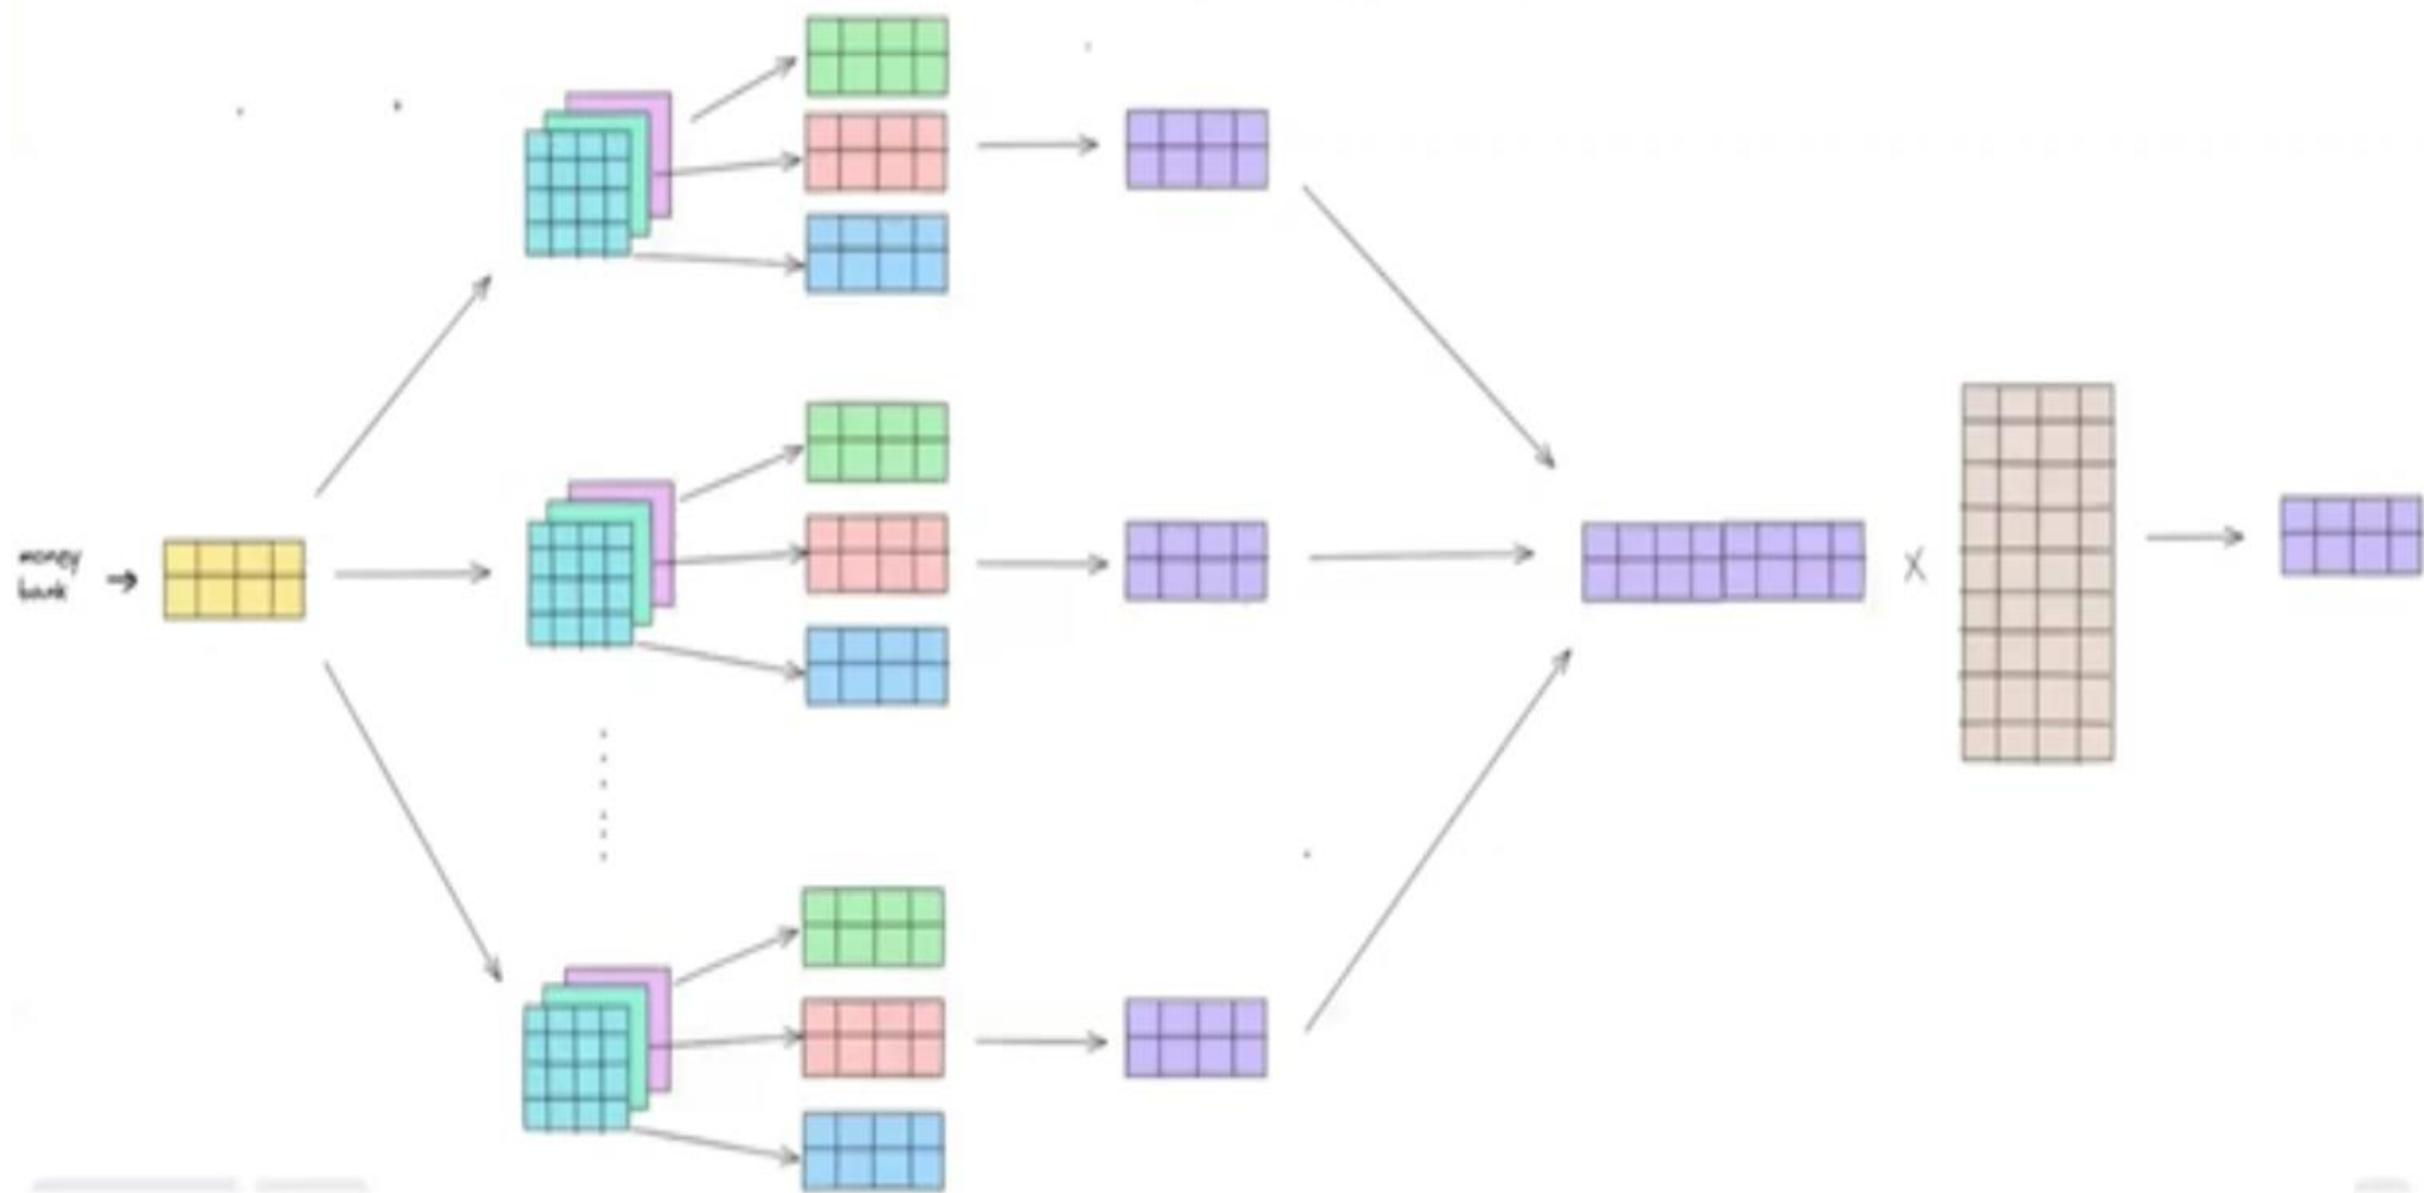

Transformer use 8 heads

Linear
Transformation

Attention is all you need

$h=2$

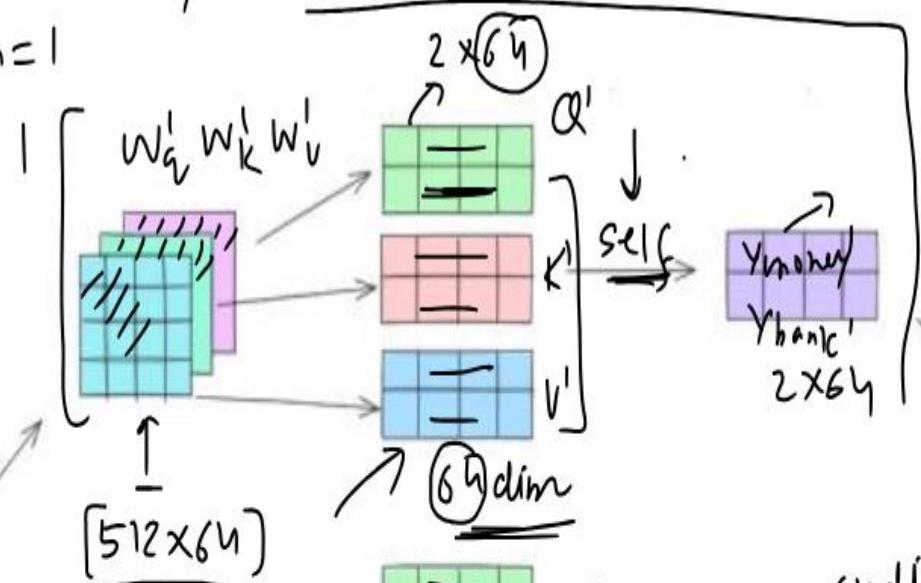

$h=8$

Q KV

$\begin{bmatrix} \text{emo} \\ \text{bank} \end{bmatrix}$ 512
[512 dim]

$\begin{bmatrix} 2 \times 512 \end{bmatrix}$

$h=1$

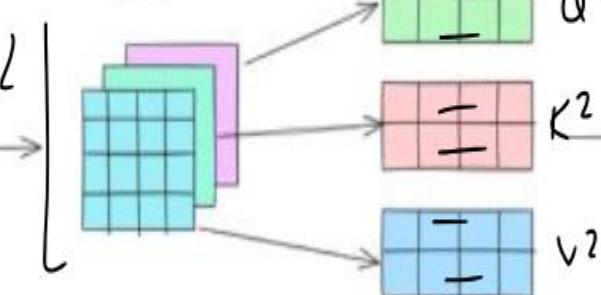

$\frac{1}{\sqrt{64}}$ dim

$64 + 64 + \dots + 8$

multi

self attention
 \downarrow
 $512 \text{ dim} \rightarrow 64$
 64

$h=2$

64 dim
 2×64

joining if
pair

$h=8$

W_q^8, W_k^8, W_v^8
 Q^8
 $K^8 \text{ self}$
 y_{money}^8

Positional Encoding why?

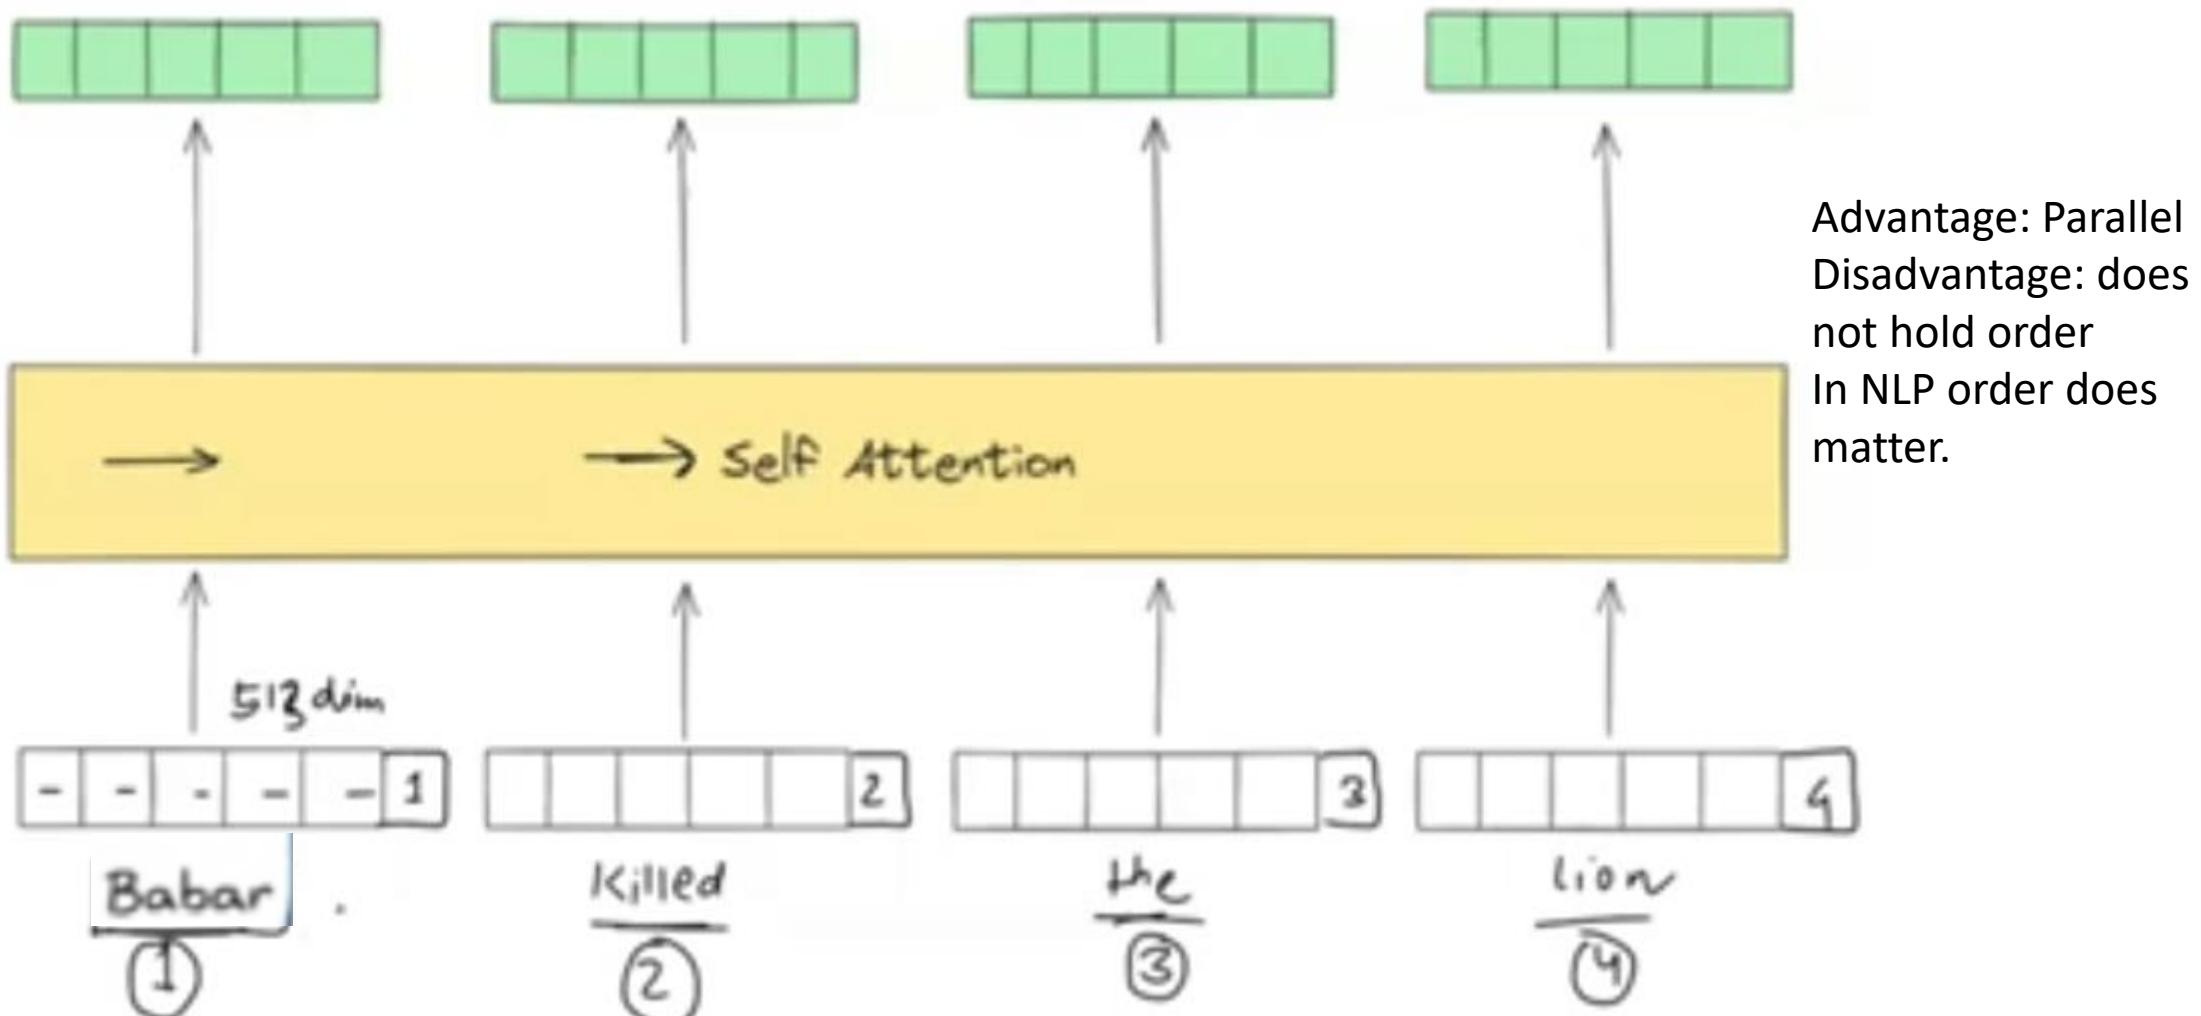

Benefit of Self-attention:
Parallelism
Drawback:
Word order is no captured.

POSITIONAL ENCODING

- Babar killed Loin
- Loin Killed Babar
- There is no order of word understood by Self-attention model. But order does matter.
- This problem is not in RNN.

Positional encoding

- Solution is in positional encoding. That preserve the position of the encoding.

problems

- Unbounded
 - Pdf book
 - Gradient become unstable
- Normalize → NO

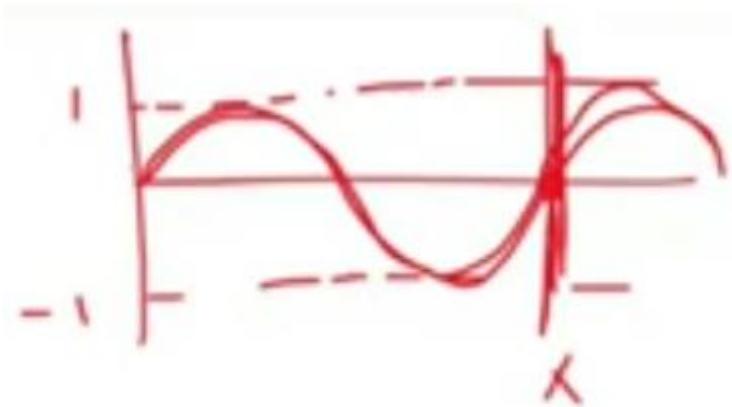

e.g .

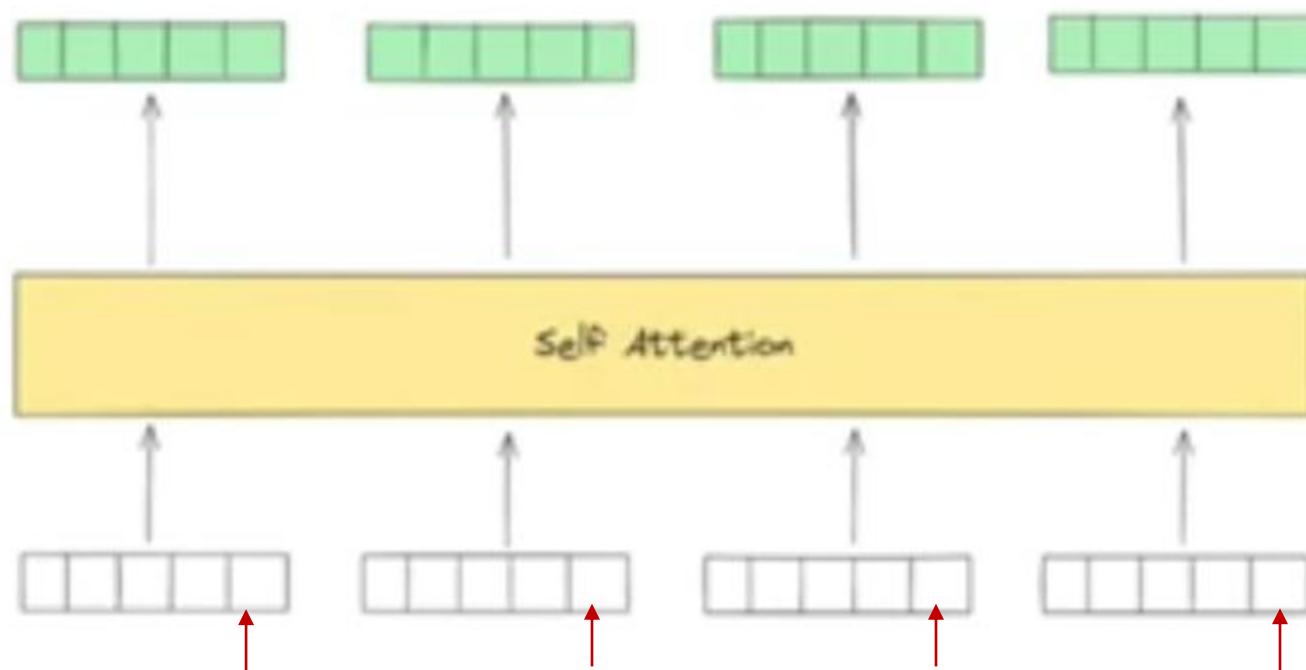

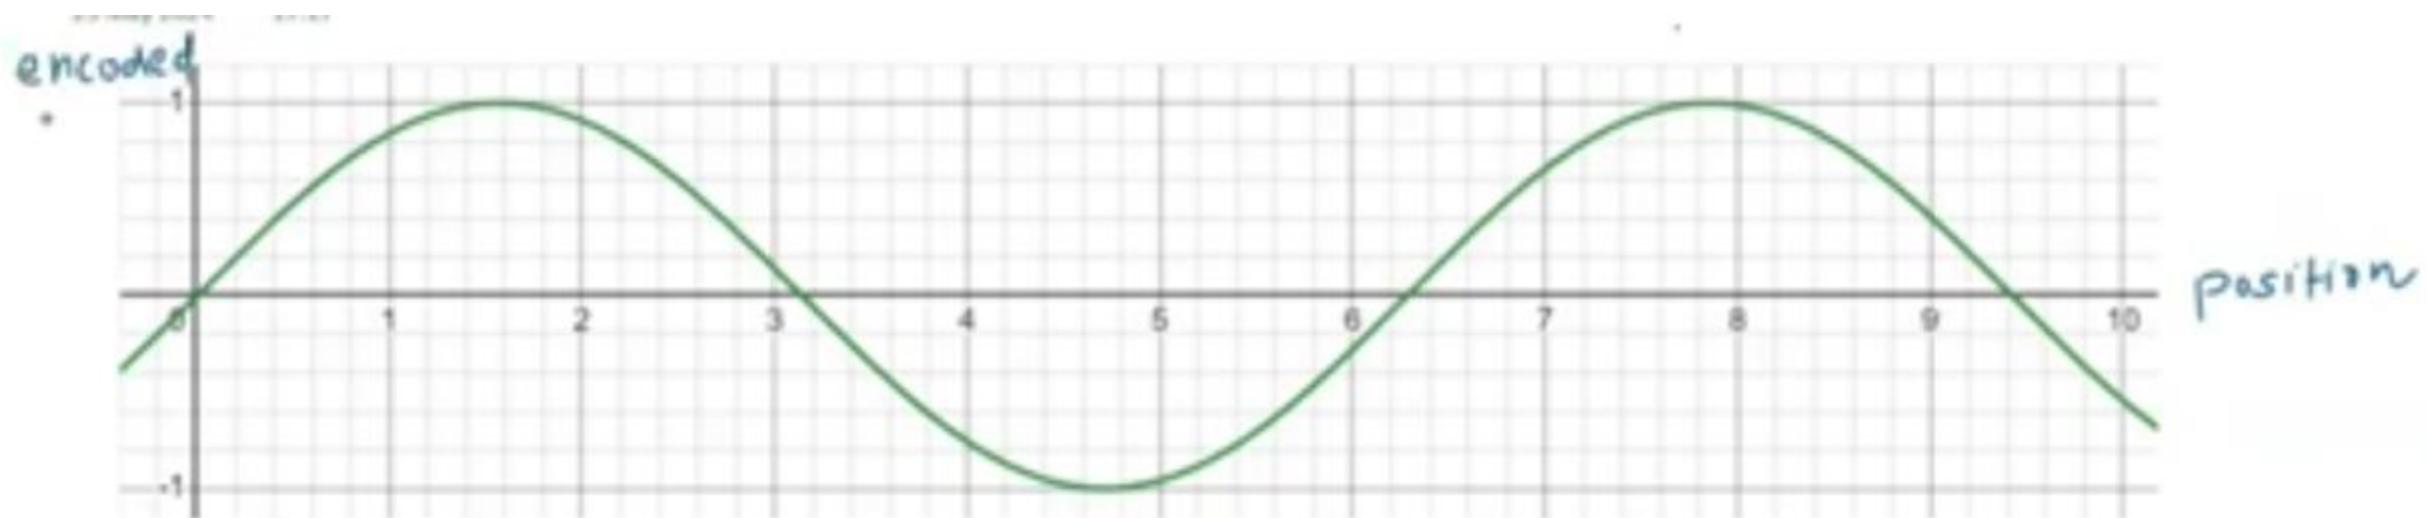

- Thank you
- Babar killed the loin

$$\frac{1}{2}, \frac{2}{2}, \frac{1}{4}, \frac{2}{4}, \frac{3}{4}, \frac{4}{4}$$

- Number are discrete. That is problem with NN
 - Numerical instability
- Can not capture relative position
 - Discrete sequence is not good
- Need a number that is bounded, continuous, periodic
 - Trigonometric function e.g sine, cos

- Periodic function
- Positional encoding

$$y = \sin(1) = 0.84$$

$$y = \sin(2) = 0.87$$

$$y = \sin(3) = 0.14$$

$$y = \sin(4) = -0.90$$

(^{envelope}
value)
y = sin(position)

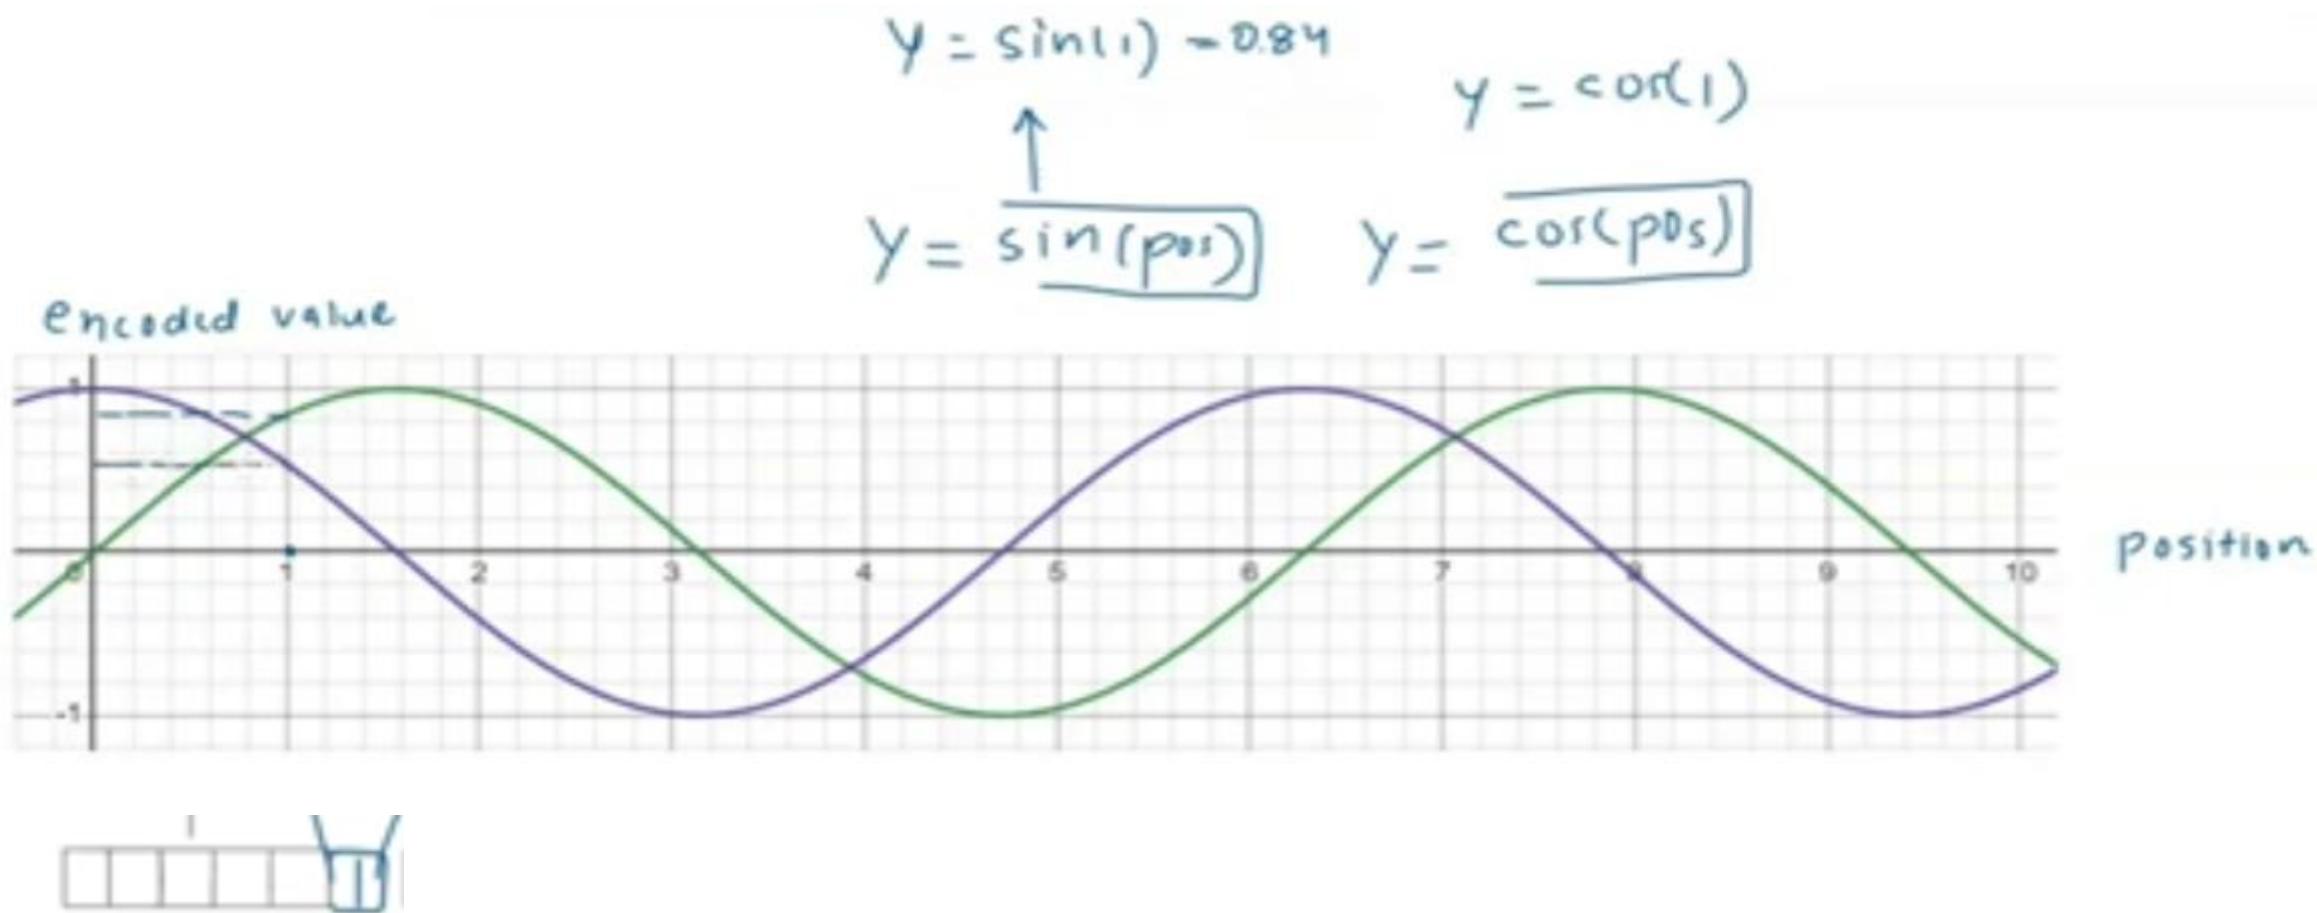

$$y = \sin(1) = 0.84$$

$$y = \sin(2) = 0.87$$

$$y = \sin(3) = 0.14$$

$$y = \sin(4) = -0.90$$

- Take two periodic functions instead of one.
- So position become vector

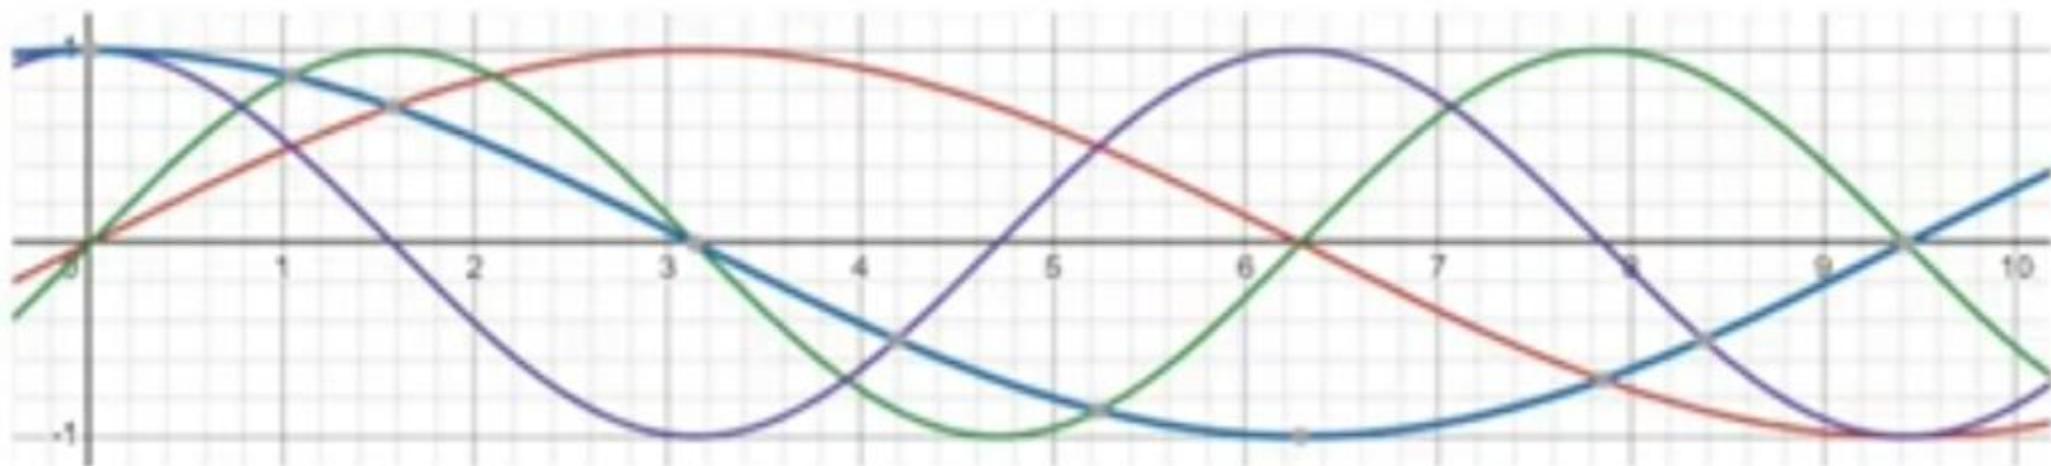

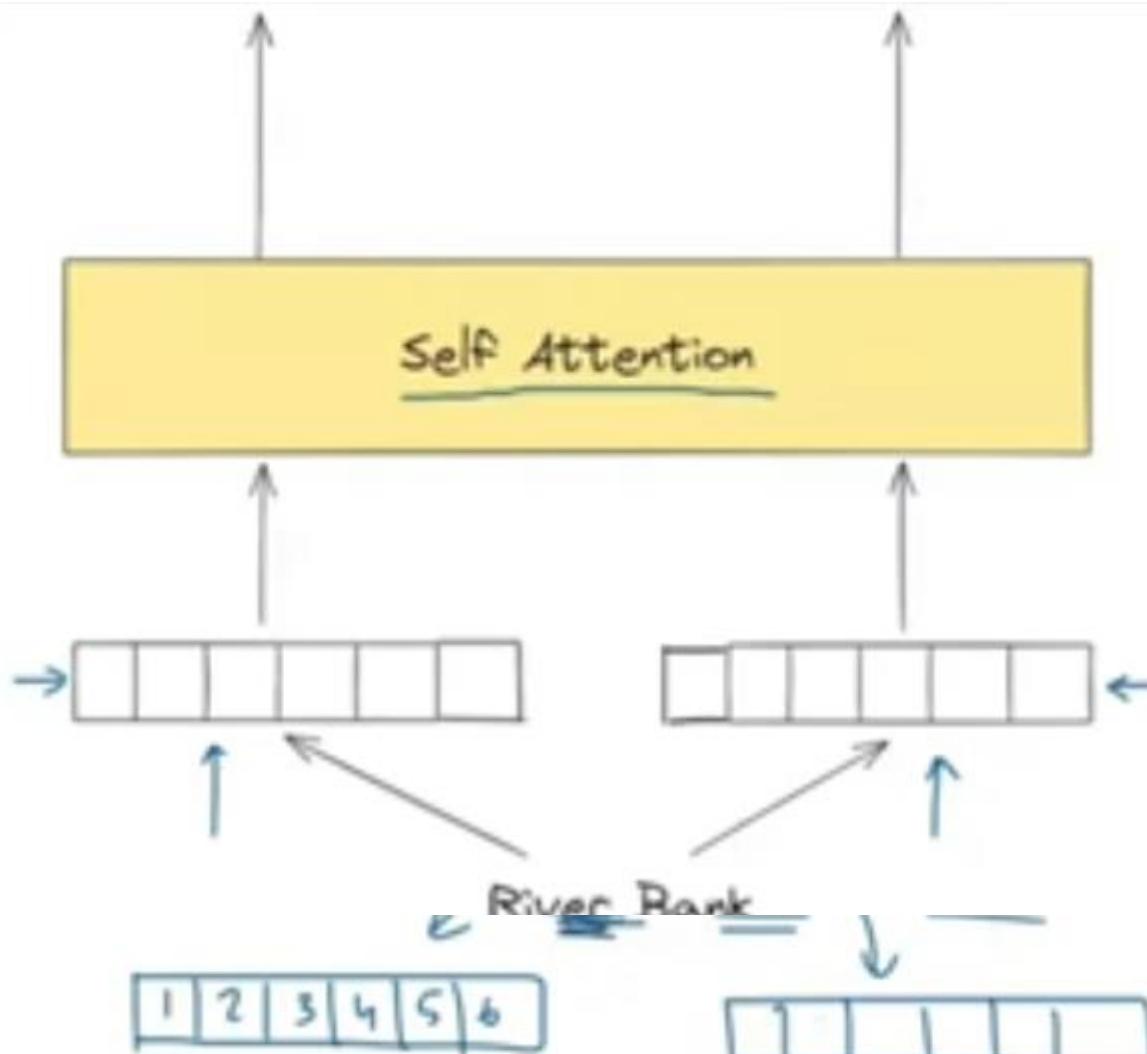

$$y = \sin(p\pi s)$$

$$y = \cos(p\pi s)$$

$$y = \sin(p\pi s/2)$$

$$y = \cos(p\pi s/2)$$

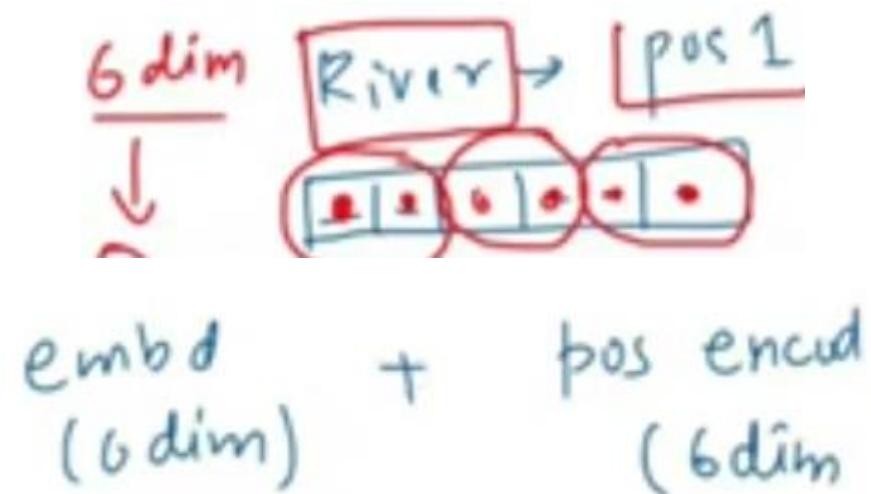

Positional encoding dimension
should be same as of word.

Add them
Not concate

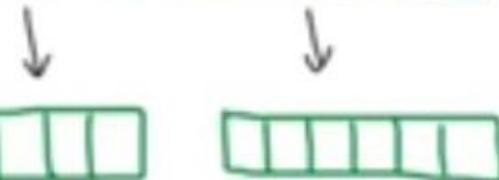

How to decide frequency?

ORGINAL PAPER FORMUAL

$pos = 0 \quad pos = 1$

→ River bank

for $i = 0$

$$PE(0, 0) = \sin(0 / 10000^\circ) = 0$$

$$PE(0, 1) = \cos(0 / 10000^\circ) = 1$$

$$PE_{(pos, 2i)} = \sin(pos / 10000^{2i/d_{model}})$$

$$PE_{(pos, 2i+1)} = \cos(pos / 10000^{2i/d_{model}})$$

$$i = 0 - \lceil d_{model}/2 \rceil$$

for $i = 0$

$$PE(1, 0) = \sin(1 / 10000^\circ) = 0.84$$

$$PE(1, 1) = \cos(1 / 10000^\circ) = 0.54$$

for $i = 1$

$$PE(1, 2) = \sin(1 / 10000^{1/3}) = 0$$

for $i = 1$

$$PE(1, 2) = \sin(1 / 10000^{1/3}) = 0.04$$

for i=1

$$PE(0,2) = \sin\left(0 / 10000^{\frac{1}{3}}\right) = 0$$

$$PE(0,3) = \cos\left(0 / 10000^{\frac{1}{3}}\right) = 1$$

for i=1

$$PE(1,2) = \sin\left(1 / 10000^{\frac{1}{3}}\right) = 0.04$$

$$PE(1,3) = \cos\left(1 / 10000^{\frac{1}{3}}\right) = 0.99$$

for i=2 ✓

$$PE(0,4) = \sin\left(0 / 10000^{2/3}\right) = 0$$

$$PE(0,5) = \cos\left(0 / 10000^{2/3}\right) = 1$$

for i=2

$$PE(1,4) = \sin\left(1 / 10000^{2/3}\right) = 0.00$$

$$PE(1,5) = \cos\left(1 / 10000^{2/3}\right) = 0.99$$
